Team Pickup
6/5/18

Sprint 1:
1. (10 Points) As a player, I want to able to select an activity and enter a location to play the game so that I can play the game.
   a. Scenario:
      i. when logged in, select Games from the Navbar
      ii. click Create A Game
      iii. input "hello" in Activity,
      iv. start typing "USA" in the location, and select from drop down
      v. input 2 in game hours
      vi. click create
      vii. the new game should display in the table
      viii. the game should be added to the user profile
2. (10 Points) As a user , I want a usable website.
   a. Scenario:
      i. go to localhost:8000
      ii. or http://frozen-wave-75005.herokuapp.com
      iii. the website should load to the home page
Sprint 2:
3. (5 Points) As a player, I want to be able to see where other games are taking place so that I can join those games.
   a. Scenario:
      i. When logged in, click on Map in the NavBar
      ii. The locations of games created should be displayed in the map within the radius provided
      iii. changing the distance in miles will display the games within the new radius upon clicking refresh
4. (5 Points) As a user, I want the choice to make my games public or private (friends only).
   a. Scenario:
      i. On game creation (like in above), click on the private checkbox before creating game
      ii. If it is selected, the game should not be displayed in the table
      iii. Go to your profile, you should see the game you created
5. (10 Points) As a player, I want to create a user profile in order to keep track of the activities so that other members can recognize me.
   a. Scenario:
      i. When logged in, click on my account, or select your user from the users list from the NavBar

        ii.   If it is your own account, there should be an option to edit and delete your games/teams

        iii.   If it is someone else's account, you should be able to add them as friend

        iv.   The profile picture, bio, games,friends should be displayed

Sprint 3:

6. (9 Points) As a member, I want to be able to create and manage a friends list in order to see what games my friends are participating in.
   a. Scenario:
      i. when logged in, go to a profile that is not your own
      ii. click on Add Friend
      iii. the button should change to pending request
      iv. Log out and log into the profile you sent the friend request to. There should be a friend request in the feed
      v. If you decline, the requester will not appear in your friend list
      vi. If you accept, the requester should appear in your friend list upon refresh
      vii. Visit the requester's page. You should also be in their friend list

7. (14 Points) As a member, I want to be able to create teams so that we can challenge others to see who's best.
   a. Scenario -- Team Creation:
      i. When logged in: Select "Join Teams" from the Navbar
      ii. Click "Create Team"
      iii. Input "The Best Team" in the Team Name field, "Baseball" in the Activity field, "Santa Cruz" in the City field, and 3 in the Max # Players field
      iv. Click "Create"
      v. The Create Team dropdown should close, and the table should refresh after a few seconds and show display the team in the table, with each column matching the inputs and the Captain field being the name you logged in as.

Sprint 4:

8. (10 Points) As a player, I want an option to join teams that are looking for extra players so that I can meet new people.
   a. Scenario -- Team Joining/Leaving:
      i. When logged in: Select "Join Teams" from the Navbar
      ii. Locate a team that you are not a part of. If necessary, perform Team Creation and then switch users.
      iii. Click the "Join" button for that team.
      iv. The table should refresh, and the team should have a "Leave" button where the "Join" button is. Additionally, the number of players should be one higher than before.
      v. Click the "Leave" button for that team.
      vi. The table should refresh after a few moments, and the team should have a "Join" button again.

9. (5 Points) As a player, I want a rain-check system so that I won't have to play in bad weather (only applies to outdoor locations).
    a. Scenario:
        i. When logged in: Select "Games" from the Navbar
        ii. Pick a game. If there are no games, create one.
        iii. Click "raincheck" for that game.
        iv. An alert popup should appear displaying the weather and temperature in Fahrenheit. Compare to other weather services to confirm the data is accurate
